                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        THAT PORMS A 1:1 STOICHIOMERRIC COMPLEX WITH THROMBIN. THIS COMPLEX IS A STEPPORTIC COMPLEX WITH THROMBIN. THIS COMPLEX IS RESPONSIBLE FOR THE CONVERSION OF PROTEIN C TO THE ACTIVATED PROTEIN C (PROTEIN CA). ONCE EVOLVED, PROTEIN CA SCISSIONS THE ACTIVATED COPACTORS OF THE COAGULATION MECHANISM, FACTOR VAND FACTOR VIIIA, AND THEREBY REDUCES THE AMOUNT OF THROMBIN GENERATED.

"Characterization of a thrombomodulin cDNa reveals structural
similarity to the low density lipoprotein receptor.";
Proc. Natl. Acad. Sci. U.S.A. 83:8834-8838(1986).
-1- FUNCTION: THROMBOWODULIN IS A SPECIFIC ENDOTHELIAL CELL RECEPTOR
THAT FORMS A 1:1 STOCKHOMETRIC COMPLEX WITH THROMBIN. THIS
COMPLEX IS RESPONSIBLE FOR THE CONVERSION OF PROTEIN C TO THE
ACTIVATED PROTEIN C (PROTEIN CA). ONCE EVOLVED, PROTEIN CA
SCISSIONS THE ACTIVATED COPACTORS OF THE COAGULATION MECHANISM,
FACTOR VA AND FACTOR VIIIA, AND THEREBY REDUCES THE AMOUNT OF
THROMBIN GENERATED.

TISSUE SPECIFICITY: Expressed in lung, heart and bone marrow.

Expressed at lower level in ovary, whole embryo and fetal liver.

Not detected in brain, adult liver or thymus. Highly expressed in peritoneal cavity and bone marrow macrophages. Not detected in epithelial cells.

DEVELOPMENTAL STAGE: First detectable in day 9 embryos, in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             endocardium and vascular endothelium in the anterior part of the embryo. Expression in endothelial cells, initially restricted to aorta, omphalomesenteric and umbilical arteries, later extends to

Complement Component Clg receptor precursor (Complement component 1, subcomponent, receptor 1) (ClgRp) (ClgR(p)) (Clg/MBL/SPA receptor)
(CD93 antigen) (Cell surface antigen AA4) (Lymphocyte antigen 68).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Admin. Genome 10:789-793(1999).

-!- FUNCTION: Receptor (or element of a larger receptor complex) for CIG, mannose-binding lectin (MBL2) and pulmonary surfactant protein A (SPA). May mediate the enhancement of phagocytosis in monocytes and macrophages upon interaction with soluble defense collagens. May play a role in intercellular adhesion. Maxker for early multipotent hematopoeitic precursor cells. May play a role in cell-cell interactions during hematopoietic and vascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The molecular characterization of the fetal stem cell marker AA4."; Immunity 10:691-700(1999).

```

```
FUNCTION: Receptor (or exament of any pulmonary surfactant protein A (SPA). May mediate the enhancement of phagocytosis in monocytes and macrophages upon interaction with soluble defense collagens. May play a role in intercellular adhesion.

TISSUE SPECIFICITY: Widely expressed. Highly expressed in lung and heart. Expressed at lower level in brain, thymus, liver, spheen, intestine, kidney, adrenal gland, muscle and testis. Expressed on endothelial cells, platelets, undifferentiated monocytes and circulating natural killer cells.

PTM: N- and O-glycosylated (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SEQUENCE FROM N.A.

                     microfibrils including the molecular cloning of MaGP-2 (MP25).";
J. Biol. Chem. 271:1096-1103(1996).
-!-FUNCTION: STRUCTURAL COMPONENT OF CONNECTIVE TISSUE MICROFIBRILS
THAT BINDS CALCIUM, FIBRILIN-1-CONTAINING MICROFIBRILS PROVIDE
LONG-TERM FORCE BEARING STRUCTURAL SUPPORT.
-!- PTM: FORMS INTERMOLECULAR DISULFIDE BONDS EITHER WITH OTHER
FIBRILLIN-1 MOLECULES OR WITH OTHER COMPONENTS OF THE
MICROFIBRILS.
-!- SIMILARITY: CONTAINS 7 TGF-LIKE DOMAINS.
-!- SIMILARITY: CONTAINS 7 TGF-BETA BINDING PROTEIN DOMAINS.
  Nicholl J.K., Sutherland G.R., Cleary E.G.; "Further characterization of proteins associated with elastic fiber
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PRO-RICH.

Patent No. 5639625

GENERAL INFORMATION:
GENERAL INFORMATION:
TYPE OF INVENTION: Method for Detecting Antibodies to TITLE OF INVENTION: Thrombomodulin in Patients
WUMBER OF SEQUENCES: 11

CORRESPONDENCE ADDRESS:
ADDRESSEE: Richards, Medlock & Andrews
STREET: 1201 Elm Street, Suite 4500
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Indels

COMPUTER READALE FORM:
MEDULU TYPE: Floppy disk
COMPUTER: IBM PC COMPATIBLE
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PATENTIN Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/312,870
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match 100.0%; Score 2916; DB 1; Best Local Similarity 100.0%; Pred. No. 8.3e-199; Matches 516; Conservative 0; Mismatches 0;

Patent No. 5639625
GENERAL INFORMATION:
APPLICANT: Carson, Craig W.
APPLICANT: Esmon, Charles T.
TITLE OF INVENTION: Method for Detecting Antibodies to TITLE OF INVENTION: Thrombomodulin in Patients
NUMBER OF SEQUENCES: 11
                                                                                                                                                                                                                                                                                         96.9%; Score 2826; DB 2; 99.8%; Pred. Published_Applications_AA:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
